

## Equipment and Applications

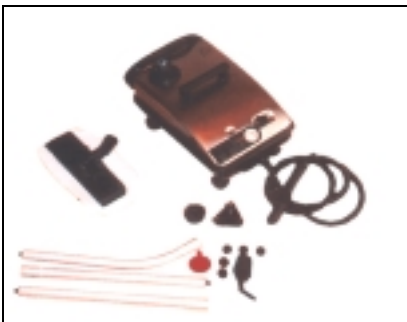

### High Density Misting System (HDMS)

Custom Designed High Density Misting equipment is specifically calibrated to automatically dispense, at predetermined intervals, the correct amount of ES Odoractant AFS. The resulting ultra-fine mist spray effectively treats all contaminated areas. HDM Systems are designed and tested to provide complete coverage of a confinement facility. HDM Systems have also been designed for lagoons, irrigation guns and manure spreaders. Current an on-going tests are proving that the use of these HDM systems greatly improves the respiratory health of barn animals by controlling odors, ammonia and hydrogen sulfide gases, dust and germs that are generated in confinement buildings. These same pollutants are easily controlled in areas such as manure pits, rendering plants, feed lots and sewer lagoons.

### Mini Fogger

Designed for confined areas or spot applications, the SteriTec Mini Fogger is ideal for areas where the HDMS systems are impractical or impossible. The resulting ultra-fine mist spray effectively treats a contaminated area.

### VaporClean System

This State of the Art cleaning system turns SteriChelle disinfectant into a high temperature vapor to clean and sanitize surfaces. Melts away all kinds of organic material from porous and non-porous surfaces while killing bacteria, fungus, mold, mildew, dust mites and other pathogens.
