

HIGH DENSITY MISTING

INTRODUCING New High Density Misting Systems (HDM) To Agricultural Industries

Intermittent Misting of Proprietary Formulations Is Proving To Be Most Effective...

Custom designed High Density Misting equipment that automatically dispenses, at predetermined intervals, the correct amount of "ES Odoractant" and "SteriChelle Disinfectant", in an ultra-fine spray, completely and effectively covers a given area.

Current and on-going tests are proving that the use of HDM Systems **greatly improve respiratory health** by controlling ammonia and hydrogen sulfide gasses, odors, dust and germs that are generated in areas such as manure pits, rendering plants, feed lots and sewer lagoons.

Testing Proves Our HDM Systems Are Safe And Effective...

Efficacy tests resulted in:

80%+ reduction in Ammonia Gas,

65%+ reduction in Hydrogen Sulfide Gas,

80%+ reduction in Odor,

65%+ reduction in Dust,

"After disinfecting a barn, HDM Systems inhibit bacterial re-growth".

Air Sampling tests resulted in:

"Any exposure of workers or occupants in barns with HDM System would be insignificant from an occupational health perspective".

Farmers Will Actually Save Money Using Our HDM Systems...

Facilities such as Porcine, Turkey, Chicken, Bovine and Dairy farms will experience a cost saving using our HDM Systems in their barns. Please contact us for a detailed analysis of these cost saving factors.
